- Host Venue

Harbin, China

- Registration fees

Free

Harbin Winter Forum on Polar Environment and Ecosystem

The Polar Regions (Arctic and Antarctic) is experiencing unprecedented change of its sea and terrestrial ice, permafrost, environment and ecosystems. Under the pressures of climate change, industrialization and modernization, the Polar region is gaining global significance for its rising strategic, economic values and those relating to scientific research, environmental protection, sea passages, and natural resources. Therefore, the Polar Regions are now receiving world-wide public attention. The establishment of the Specialized Committee for Polar Environment and Ecosystem, Chinese Society for Environment Science (SCPEE-CSES), was approved by the Council of the Chinese Society for Environment Science on September 4th, 2018. We will organize the Harbin Winter Forum on Polar Environment and Ecosystem in Harbin to provide a major interdisciplinary forum for presenting new approaches and new ideas. We are pleased to announce the call for attendees for the forum. The forum will provide a chance for international experts and students to exchange up-to-date knowledge on their research areas. During the forum, the world's foremost scientists will discuss the emerging global challenges and opportunities arising from climate change and modernization in the circum-Arctic and other issues.

We look forward to welcoming you to the forum!

Harbin Winter Forum on Polar Environment and Ecosystem

10-12 January 2020, Harbin, China

➤ **Topics include, but are not limited to**

- Historical role and future missions of AMAP
- Emerging chemicals in Polar: concern, identification, monitoring, assessment
